

CLINIQUE LA PRAIRIE

SWITZERLAND

A NEW HAIR TECHNOLOGY USING ROBOTICS EXCLUSIVE TO CLINIQUE LA PRAIRIE

**Regain your youthful appearance with the robotic
intervention of ARTAS®**

How does the procedure take place ?

The first step involves a consultation with the experienced cosmetic surgeon (with over 20 years of expertise). Your doctor will present simulations, indicating the number of grafts required and the optimal frontal hairline model tailored to your expectations.

The second phase is a procedure performed under local anesthesia in one of Clinique La Prairie's operating rooms. During this phase, the physician, aided by state-of-the-art minimally invasive robotic precision technology, will identify and select the most suitable hair for harvesting. The hair is selectively harvested to preserve the appearance of the donor area and protect existing healthy hair. Your harvested hair is then transplanted onto the balding areas.

What are the advantages of this technology?

- Premium quality grafts
- Quick, efficient, and precise extraction and transplantation
- Achieve permanent and natural results in just a few months
- Mild discomfort, almost no pain
- Fast recovery in a few days
- No visible scars
